

### **3. Development of Facile Energy Management System “ENESCALE”**

**Masaya Iwashita, Masafumi Moteki**

ENESCALE (trade name), a facile energy management system that can be installed at a relatively small building or factory, has been developed. Compared with conventional building energy management systems, the newly developed system is simple in functionality and simple to operate. Additional functions for communications control and operation assistance enable the system to meet diverse customer needs.

**Key words :** amount of electricity, energy saving, visualization, PLC
